

## Re-order the Water Cycle

<b>Curriculum Area:</b> Science <b>Level 1/2</b>	<b>Strand:</b> Planet Earth and Beyond	<b>Background Page:</b> The Water Cycle
<b>Achievement Aims:</b>	<u>Interacting systems</u>  Levels 1-2: <i>Describe how natural features are changed and resources affected by natural events and human actions.</i>	

**Task:** Cut out each part of the water cycle and put each part in the right order

These rise into the air. Plants and trees also make water vapour.

. Water which falls to earth makes streams and rivers or soaks into the ground.

The Sun warms the water on the land, sea, rivers and lakes.

This water vapour forms drops and falls back to the earth as rain, hail or snow.

. Condensation happens when water vapour cools high in the air and makes clouds.

Evaporation happens when water warmed by the sun turns to tiny droplets of water called water vapour.
